

ABSTRACT

A graphic user interface (GUI) and method for readily creating and
5 manipulating sequential media presentations, such as pictures slide shows, allows a
user to select media for a sequential media presentation in the order in which the
selected media is to be displayed in the presentation by simply drawing an arrow that
intersect onscreen representations of the selected media. In addition, the user may
manipulate various parameters of the selected media as the selected media are being
10 played back.
